

ÄKTA systems

Lab-scale protein purification

ÄKTA

ÄKTA™ lab-scale protein purification systems are designed for purification of biomolecules, providing speed and flexibility in research and process development. ÄKTA systems use intelligent UNICORN™ system control software to combine simplicity with power in protein purification from your lab bench to process development and full-scale bioprocess production. Scientists all over the world rely on ÄKTA systems, columns, and resins for their protein purification needs.

ÄKTA start

ÄKTA start

Affordable and easy-to-use protein purification

ÄKTA start, our simplest ÄKTA system, is an affordable, easy-to-use protein purification system that allows you to automate manual protein purification procedures in academic and educational labs. Save time, minimize labor, and learn how to use automated chromatography.

- Transition easily from manual to automated purification
- Get educated in protein purification techniques
- Gain deeper insights than with manual purification

Transition easily to automated purification

We have thought about how to make your work easier at every step. From method creation and sample loading to expanding your system with fraction collection and data analysis. Make the change to ÄKTA start for convenient, automated purification that delivers reproducible results.

Get educated in protein purification techniques

Utilize ÄKTA start to learn about purification of antibodies, tagged proteins, or untagged (native) proteins. Practical exercises using different chromatography techniques, column formats, and how to use UNICORN software provide an efficient way to train students.

Gain deeper insights

UNICORN start software is intuitive and user-friendly, guiding you through each step in your purification—from creating a protocol and setting up your run to evaluating your results and custom creating a report. Gain valuable insights from real-time monitoring.

Compact and ergonomic system design. ÄKTA start fits neatly on your bench-top, and has a front-facing work area that allows easy access to the system. Run ÄKTA start using the intuitive touchscreen.

ÄKTA go

Achieve desired purity with ease in routine purifications

ÄKTA go is a compact system to support routine protein purification conducted in research laboratories. The system supports commonly used chromatography techniques in an easy and accessible manner.

- Make the most of valuable laboratory bench and cold cabinet space
- Intuitive method creation including columns and resins data
- Interactive **Process picture** for easy access of commands

Make the most of valuable laboratory bench and cold-cabinet space

ÄKTA go is a compact system that includes all the needed functionality for commonly used chromatography techniques used in routine protein production. The small system footprint saves valuable space on your lab bench or in cold cabinets. The ability to place bottles on top and the fraction collector beneath the system also helps to save space.

Intuitive method creation including columns and resin data

Methods for automated runs can be created in minutes using preprogrammed methods. Simply select the chromatography technique you would like to run and enter the requested run parameters. By selecting the column to be used, column data such as flow rate and pressure limits are prepopulated with default parameters to ensure the highest level of safety and integrity for the column, system, and chromatography run.

Interactive **Process picture** for easy access of commands

The interactive **Process picture** helps you quickly start manual runs and enables manual interaction during automated runs. The **Process picture** will also allow for easy monitoring of the run, clearly displaying all relevant run data and system state. The **Process picture** gives you intuitive access to all essential information and necessary functionality.

ÄKTA pure

Easily customizable to meet current and future purification challenges

ÄKTA pure is a flexible purification system for proteins, peptides, and nucleic acids from microgram levels to tens of grams of target product in research applications. ÄKTA pure 25 is designed for a broad range of purification tasks in a multiuser environment, and ÄKTA pure 150 is well-suited for larger-scale (tens of grams) preparative purification.

- Tailor your protein purification system
- Flexible software to build automation methods to your needs
- Match most purification challenges

Tailor your protein purification system

ÄKTA pure can be tailored to your precise needs through a broad selection of hardware options, from valves to monitors and fraction collectors. There is an ÄKTA pure for almost any imaginable purification task, from standard purification of tagged proteins to unattended multistep purifications. Connecting and communication of external equipment, such as detectors or an autosampler, is enabled with the external equipment interface (I/O-box).

Flexible software to build automation methods to your needs

ÄKTA pure is used with UNICORN control software. The software includes built-in knowledge for planning, control, and evaluation of protein purification runs. Included in the software is the **Method editor** with predefined methods for all of our lab-scale chromatography columns. **Text editing** provides flexibility for advanced methods such as automated multistep purification for increased efficiency.

Match most purification challenges

ÄKTA pure can be used for a wide range of techniques, such as affinity chromatography (AC), ion exchange chromatography (IEX), multimodal chromatography (MMC), hydrophobic interaction chromatography (HIC), and size exclusion chromatography (SEC). System hardware and software are designed to match applications utilizing the various techniques.

Start simple and expand for future needs

When you would like to start with standard protein purification but still be assured that the system can grow with your future needs.

Automated purification of antibodies and antibody fragments with ÄKTA pure

When you need to purify lots of different monoclonal antibodies for evaluation in discovery programs or other development projects.

ÄKTA avant

Gain productivity in process development

ÄKTA avant is a purification system designed for fast and secure development of scalable methods. ÄKTA avant is available in two versions: ÄKTA avant 25, designed for screening; and ÄKTA avant 150, suitable for scaling up to larger columns.

- Screening and optimization
- Scale-up and scale-down studies
- Accelerated process development with DoE

Screening and optimization

ÄKTA avant 25 is optimized for resin screening and method optimization using small HiTrap and HiScreen columns. The integrated **BufferPro** function includes ready-made buffer recipes to deliver buffers for scouting and preparation of buffer plates. Multiple sample and buffer inlets add automation possibilities for increased efficiency.

Scale-up and scale-down studies

ÄKTA avant 150 is designed for scaling up to larger columns, such as HiScale and AxiChrom™ columns, as well as fine-tuning and robustness testing of the optimized process before moving on to pilot scale. Intelligent Packing of the AxiChrom columns, with 50 and 70 mm inner diameters, is supported via preprogrammed packing methods. ÄKTA avant can also be used for performing scale-down studies, such as viral clearance studies on HiScale 10/40 or Validation columns.

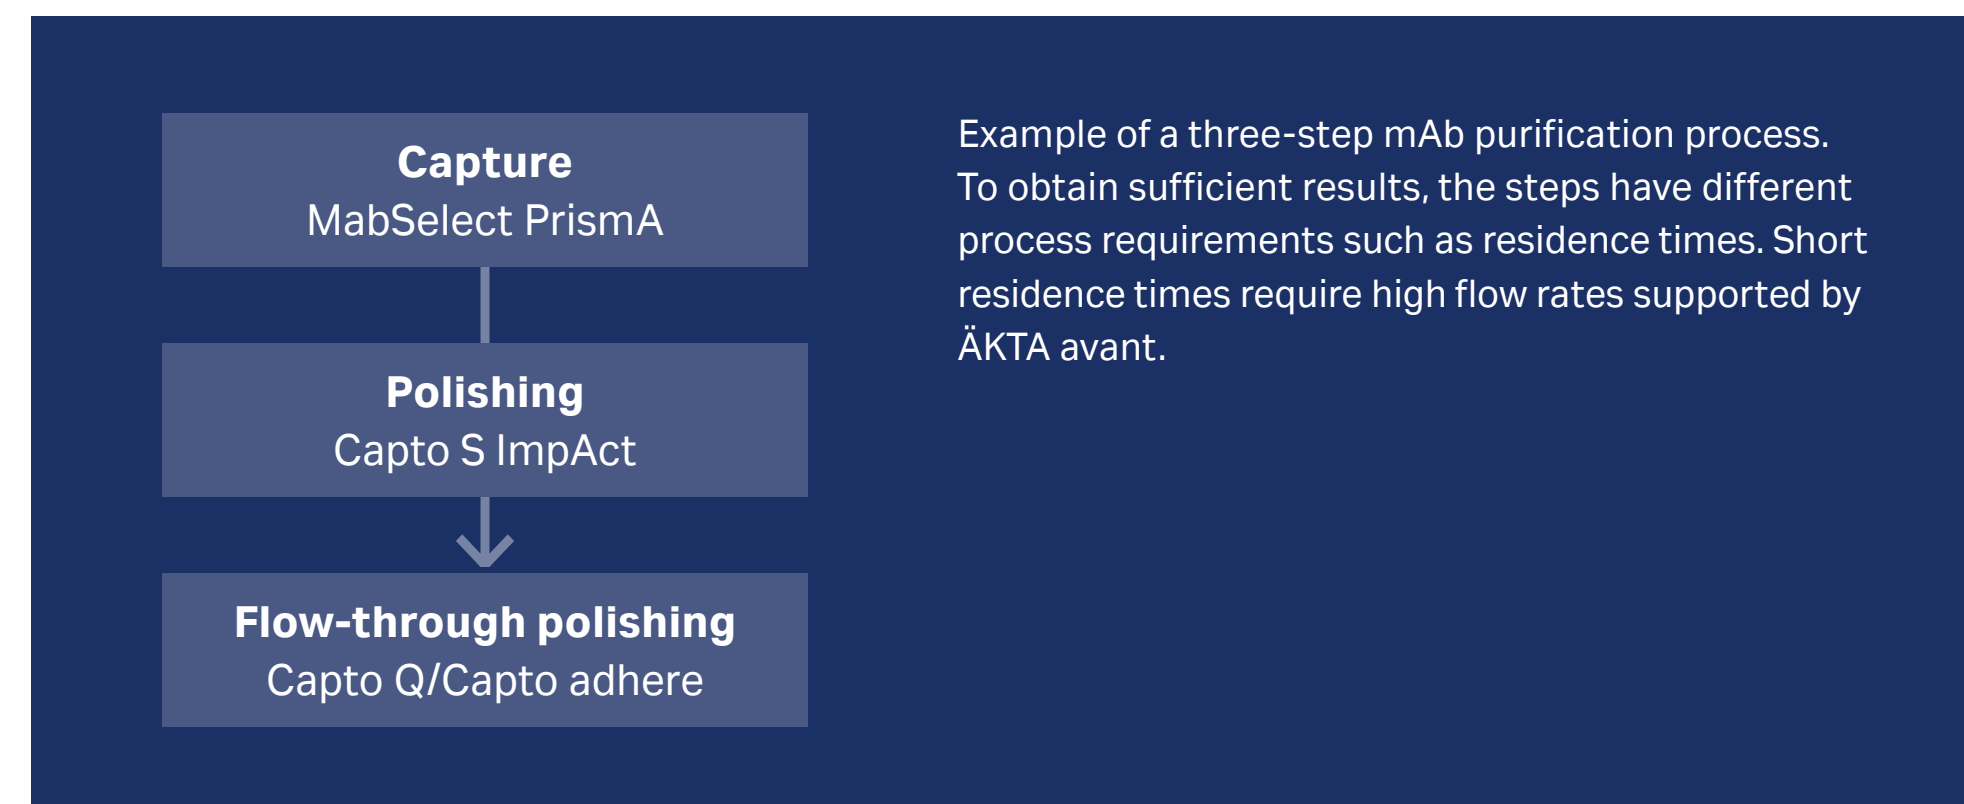

Accelerated process development with DoE

Using the integrated design of experiment (DoE) functionality of UNICORN software, the number of experiments required to obtain sufficient process information can be greatly reduced. The software allows you to set up your experimental design and automatically generate chromatography scouting runs to save time.

Use high-flow resins with ÄKTA avant for shorter runtimes

BioProcess™ chromatography resins are widely used by biopharmaceutical manufacturers. ÄKTA avant has the flow rate and pressure specifications that support high-flow chromatography resins such as MabSelect™ and Capto™ product ranges. These resins provide high dynamic binding capacity even at high flow rates. Using ÄKTA avant together with BioProcess resins can reduce runtimes, increase productivity, and allow easy scale-up.

Rapid cycling with Fibro chromatography

With purification cycles in minutes rather than hours, throughput can be increased up to 20-fold compared to resins.

ÄKTA avant provides high operational security

With built-in protection of the column and packed bed, runs can be securely performed at the maximum flow rate of the packed column. Keep track of column usage and performance with **Column logbook**. The built-in fraction collector keeps your fractions securely cooled when the system is used outside of working hours.

UNICORN

Software for fast and efficient protein purification

UNICORN software has supported protein purification for 25+ yr and provides extensive application knowledge. UNICORN is used with ÄKTA systems to plan and control runs, as well as analyze results. The UNICORN platform is fully scalable and is suitable for use in research and all the way to manufacturing.

- Gives you interactive control
- Keep track of column performance
- Simplicity for quick evaluation of your results

Interactive control

UNICORN software gives you real-time control of protein purification systems. Every step is easy and methods are generated quickly using predefined methods, drag-and-drop function with predefined phases, or text editing for full programming control in the intuitive **Method editor**. The interactive **Process picture** shows the state of the chromatography run and the active flow path. It also provides full access to parameter settings for manual control of your run.

Keep track of column performance

Column logbook keeps track of column performance and important run data, providing traceability and increased operational security. Columns can be identified using a barcode scanner.

Simplicity for quick evaluation

UNICORN provides complete functionality, with the **Evaluation module** providing a simplified user interface optimized for most commonly used workflows. Key functionality is accessed with single-click operation and ribbon interface. Your preferred way of visualizing results can be selected using the tile overlay view and sort by scouting variables.

Networking capability

With UNICORN software installed in a network configuration, methods can be developed, runs monitored, and results evaluated from your office computer.

Over the network, developed methods and results are easily shared among users and between instruments.

UNICORN online

UNICORN online is an add-on to UNICORN control software that provides intuitive, remote control and monitoring from mobile devices and computers. Contact your sales representative for more information and installation.

cytiva.com/UNICORN →

UNICORN start

UNICORN start is the control software designed for ÄKTA start. UNICORN start allows you to design runs, operate the ÄKTA start instrument, and evaluate and share results. While ÄKTA start can function as a stand-alone system UNICORN start software maximizes the performance of the instrument.

Monitor your run using the interactive **Process picture** map. This valuable functionality gives you real-time information about the current step, chromatogram, and various curves. Methods can be created using predefined templates or created by dragging and dropping chromatography phases from the **Phase library**.

Prepacked columns and resins for protein purification in research scale

We offer products for high quality, reproducible purification of most proteins and biomolecules. If you need a helping hand to select resins and prepacked columns or if you want to build your own ÄKTA chromatography system, try the Purify app.

[cytiva.com/purify-app](https://www.cytiva.com/purify-app) →

Affinity chromatography

Affinity chromatography (AC) separates proteins on the basis of a reversible interaction between the target protein (or group of proteins) and a specific ligand attached to a chromatography matrix. AC separates molecules on the basis of biorecognition, including different tagged recombinant proteins such as Histidine, Glutathione S-Transferase (GST), Strep-tag™ II and Maltose-binding protein (MBP), as well as different resins for antibody purification. AC offers high selectivity and intermediate to high capacity. Elution can often be performed under mild conditions.

Size exclusion chromatography

Size exclusion chromatography (SEC, or gel filtration) allows separation of substances with differences in molecular size, under mild conditions. SEC can be used for protein purification (fractionation) or for group separation in which the sample is separated in two major groups.

Ion exchange chromatography

Ion exchange chromatography separates proteins with differences in surface net charge to give high-resolution separation with high sample loading capacity. The separation is based on the reversible interaction between a charged protein and an oppositely charged chromatography resin.

Multimodal (mixed mode) chromatography

Multimodal ion exchangers, for example, Capto adhere and Capto MMC, have been developed to offer novel selectivities. The charged ligands are complemented with extra functional groups that introduce additional cooperative interactions (combinations of hydrogen bond, hydrophobic, and van der Waals' interactions).

Hydrophobic interaction chromatography

Hydrophobic interaction chromatography separates proteins with differences in hydrophobicity. Separation is based on the reversible interaction between a protein and the hydrophobic surface of a chromatography resin.

Upgrade your protein purification system

ÄKTA systems have offered versatile and reliable protein purification since the 1990s. As a consequence of the renewal of the ÄKTA system platform, production of ÄKTAexplorer, ÄKTApurifier, ÄKTAFPLC, ÄKTAprime plus, ÄKTExpress and ÄKTAmicro has been discontinued. To improve your protein purification output, we recommend upgrading to ÄKTA avant, ÄKTA pure, and ÄKTA go. These systems (see table on the right) will help you to:

- Simplify everyday chromatography by quick and simple method creation and evaluation in UNICORN 7.
- Support high flow velocities for use with high-flow chromatography resins or large column diameters.
- Increase efficiency and operational security with column protection and **Column logbook**, integrated air-sensors, and less replumbing.

Plan for a smooth transition, visit the Purify app to learn about ÄKTA go, ÄKTA pure, and ÄKTA avant.
